On data archaeology and how to prevent a "Digital Dark Age"

Data loss is a serious concern. With the number of ancient file types and software, a plan for archiving this data is paramount if we are to maintain both personal and historical records. There are people who do this for a living, and have best practices established. However, more people need to recognize the issue because if not, this could be a serious crisis.

Panel recommends doubling government spending on artificial intelligence (AI) and machine learning

The National Security Commission on Artificial Intelligence has released its first recommendations for the government. This includes spending roughly double on AI outside of just the defense department. The government intends to roll out these changes over the next several years.
