Boeing 787s must be turned off and on every 51 days to prevent 'misleading data' being shown to pilots

The US Federal Aviation Administration has required operators to completely shut down Boeing 787s every 51 days because of errors such as network swich crashes.

Airbus A350 software bug forces airlines to turn planes off and on every 149 hours

The EU Aviation Safety Agency is urging its Airbus A350 operators to reboot the craft after every 149 hours being turned on, as loss of function can occur.
